Chapter 1 by Dove Moon

Anyone have a theory they wish to share?

I have one: I believe that if the theory of the large asteroid smashing into the earth and killing all of the dinosaurs is correct, the world would have had to have been Pangaea back then, and the asteroid provided the force needed to make it break apart and drift away, forming the countries we know today. This would be why there are fossils for one type of dinosaur is found in many different continents and why some parts of the earth's "puzzle" is missing, (they are most likely under the ocean).

Have any theory's you want to share? They could be about anything, t.v. shows, science, catastrophes, anything!
